TECHNICAL NOTES FOR SELECTED CALIFORNIA REPORTABLE DISEASE MONTHLY SUMMARY REPORT:

In interpretation of the numbers in this report, please consider the following points:

- \* Because of inherent delays in case reporting and depending on the length of follow-up clinical, laboratory and epidemiologic investigation, cases with estimated onset dates may be added or rescinded after the date of this report. Therefore, data in this report particularly for the current year are provisional and may differ from data published in future reports.
  - \*\* Estimated onset date is the date closest to the time when symptoms first appeared. Since date of onset may not be recorded, the estimated date of onset can range from the first appearance of symptoms to the date the report was made to CDPH.
- (1) Chlamydial Infections, including Lymphogranuloma Venereum (LGV)
  - (2) *Escherichia coli*: shiga toxin producing (STEC) including *E. coli* 0157 (with or without HUS)
  - (3) Hemolytic Uremic Syndrome. Includes all cases, where applicable a case may also be reported as "E. COLI / STEC"
  - (4) Staphylococcus aureus infection (only a case resulting in death or admission to an intensive care unit of a person who has not been hospitalized or had surgery, dialysis, or residency in a long-term care facility in the past year, and did not have an indwelling catheter or percutaneous medical device at the time of culture)
